## PROFILE

Full-stack developer with a year of professional experience taking web products from an empty database to a deployed interface. I design PostgreSQL schemas, build modular NestJS APIs with JWT and role-based access, and then build the React and Next.js front ends that run on them — typed, responsive and multilingual. Alongside my jobs I have built and deployed five products of my own, including a multi-tenant LMS, a gym CRM and a free map tool, and I write Kotlin and Home Assistant software for smart buildings.

## TECHNICAL SKILLS

|               |                                                                                                                                                                                                                             |
|---------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| Frontend      | React, Next.js (SSR, ISR), TypeScript, JavaScript (ES6+), Redux Toolkit, TanStack Query, React Router, Tailwind CSS, shadcn/ui, MUI, Ant Design, styled-components, Recharts, Leaflet, HTML5, CSS3, responsive design, i18n |
| Backend       | Node.js, NestJS, Express, REST API design, GraphQL, JWT & RBAC, Passport, class-validator, Swagger, Telegram bots (Telegraf), BullMQ, Redis, Socket.IO, file uploads, scheduled jobs                                        |
| Databases     | PostgreSQL, MongoDB, Prisma, TypeORM, Sequelize, Mongoose, schema design, relations, migrations, SQL                                                                                                                        |
| Tools & other | Git, GitHub, Docker, GitHub Actions (CI/CD), Nginx, PM2, Vercel, Postman, Figma, Kotlin, Jetpack Compose, Home Assistant, Python                                                                                            |

## EXPERIENCE

**Software Engineer** Apr 2026 — Sep 2026  
[BMS Smart Home](#) · Smart building systems

- Built a native Android wall-tablet app in Kotlin and Jetpack Compose that controls a whole apartment from one screen, building its rooms automatically from the Home Assistant area registry.
- Shipped a kiosk browser that locks tablets to the building dashboard, survives reboots, accepts remote HTTP commands and installs its own updates from GitHub releases.
- Wrote two Home Assistant integrations: a live 3D floor plan in Three.js where every light and sensor is bound to the scene, and a push-to-talk intercom streaming microphone audio to any speaker over WebSocket.

Stack: Kotlin, Jetpack Compose, Python, Home Assistant, Three.js, Lit, WebSocket

**Software Engineer** Sep 2025 — Feb 2026  
[Najot Ta'lim](#) · IT education centre

- Developed internal web applications and REST APIs with NestJS, PostgreSQL and React.
- Took features from database schema to finished interface, including authentication, roles and reporting.
- Handled deployment, code review and production fixes.

Stack: NestJS, PostgreSQL, Prisma, React, TypeScript

## SELECTED PROJECTS

Personal products, built independently and deployed publicly. Live demos and source code below.

**EduFlow** — full-stack LMS & CRM Live demo · API · Frontend  
NestJS 11, Prisma 7, PostgreSQL, Telegraf, React, TypeScript, shadcn/ui. Multi-tenant platform with five roles, Telegram activation, an optional AI assistant and demo accounts on the login page.

**GymBros** — full-stack gym CRM

[Live demo](#) · [API](#) · [Frontend](#)

NestJS, Prisma, PostgreSQL, React, TanStack Query, Tailwind, Recharts. Memberships, check-ins, payments and financial reports, with analytics dashboards for three roles.

**LandMeasure** — Next.js map tool

[Live site](#) · [Code](#)

Next.js, TypeScript, Leaflet, Turf.js, i18next. Draw a plot on satellite imagery and get its area in six units with  $\pm 0.1\%$  accuracy, in three languages.

**Nornlight & Seedra** — e-commerce front ends

[Nornlight](#) · [Seedra](#)

React, styled-components, Tailwind, Swiper. Catalogue, search, favourites, product comparison and cart, built pixel-accurate from Figma, plus a separate admin dashboard.

**BMS Tablet & Kiosk Browser** — Android, smart buildings

[App](#) · [Kiosk](#)

Kotlin, Jetpack Compose, Home Assistant API. Whole-home control on a wall tablet, and a locked-down kiosk browser with a PIN-protected admin panel and self-updating releases.

**Backend portfolio** — six more production-shaped APIs

[All repositories](#)

Food delivery (vendors, orders, couriers), Sevimli Play (streaming with profiles, plans and watch history), Hospital (appointments, records, prescriptions), Donation, Pharmacy and Milliy. NestJS with TypeORM, Sequelize or Mongoose, all documented in Swagger or Postman.

EDUCATION

---

**Tashkent University of Information Technologies (TUIT)**

2024 — Present

Economics — Faculty of Economics and Management in ICT, Bachelor's degree in progress

**Najot Ta'lim — Full-Stack Web Development bootcamp** (8 months)

Jul 2025 — Feb 2026

Node.js, NestJS, PostgreSQL, MongoDB, Prisma, TypeORM, GraphQL, Docker, CI/CD, React, Redux, Next.js

**Najot Ta'lim — Programming Foundation bootcamp** (3.5 months)

Jan 2025 — May 2025

Algorithms, JavaScript, HTML, CSS, responsive layout and Git
